Safehouse

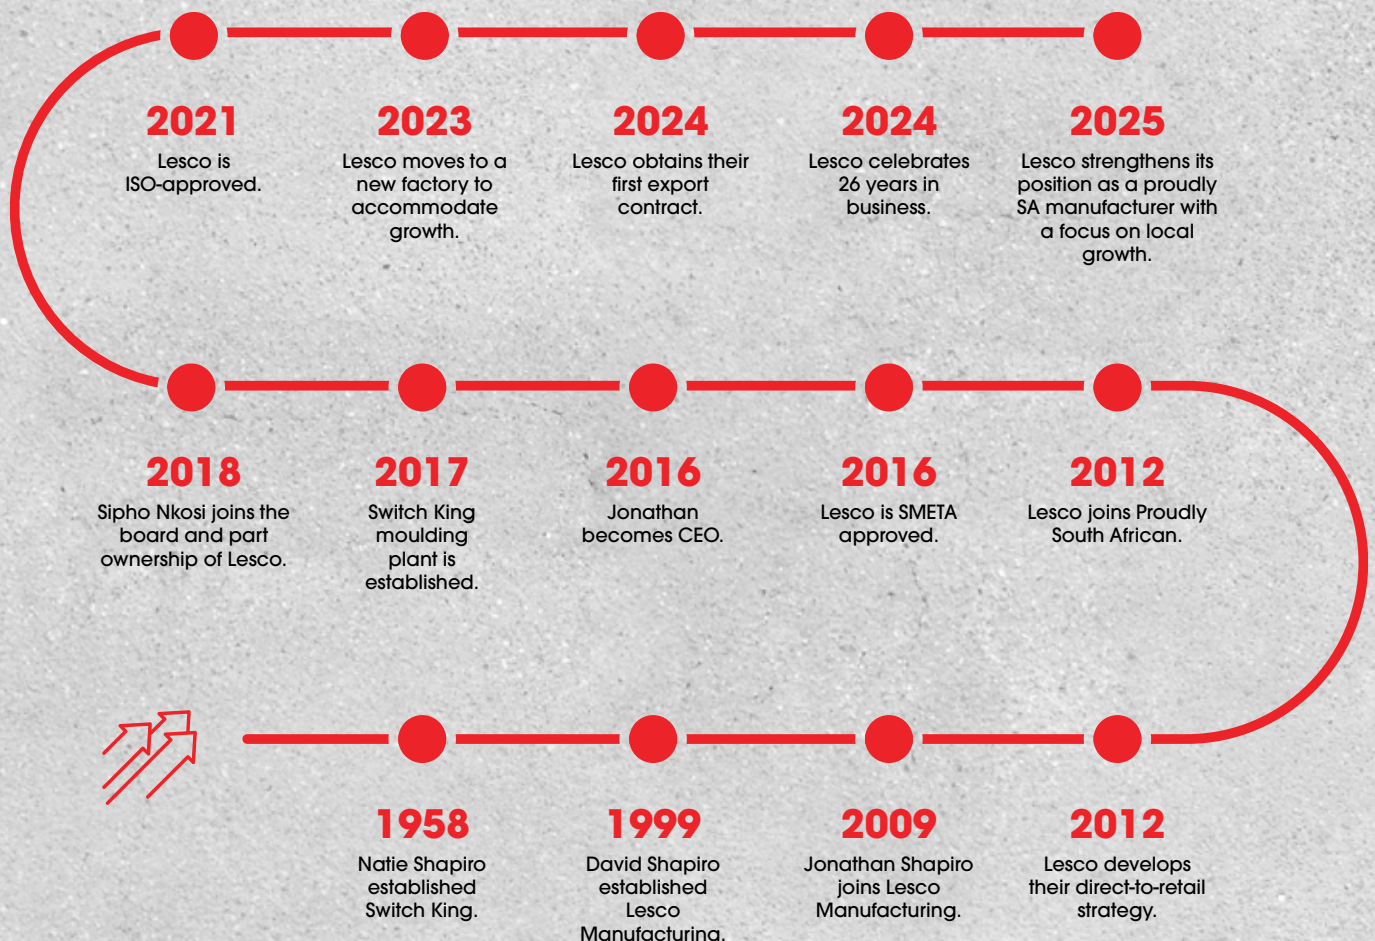

Built on Legacy Driven by Innovation

Our story begins in 1958 with the establishment of Switch King, a successful circuit board distribution Businesses. Natie Shapiro, a visionary... Fast forward to 1999, Natie's son David takes the reins and, driven by Switch King's triumph and his profound love for South Africa, established Lesco Manufacturing. Today, under the capable leadership of David's son, Jonathan Shapiro, Lesco continues to stand unwavering in its dedication to crafting high-quality electrical products for the South African market, all the while actively supporting traditionally marginalised communities in South Africa.

- To a retailer, Lesco is proudly South African preferred supplier.
- To a home-owner, Lesco is a brand of safe and high-quality electrical products
- To the youth and traditionally unemployable, Lesco is an employment opportunity
- To the African continent, Lesco is a driver of sustainable change.

Lesco remains committed as a mission-driven organisation, focusing on empowering individuals with disabilities, women, and youth. As we grow into new markets, the one thing that remains constant is our unchanging belief that our differences are what make us unique. This continues to be the thread through which we operate.

Natie Shapiro

Businessman, people's person and visionary Natie Shapiro founded Switch King, the legacy that is now Lesco Manufacturing all the way back in 1958.

David Shapiro

Product-designer, entrepreneur, inventor, and philanthropist, David Shapiro founded Lesco Manufacturing in his garage following Switch King's closing.

Jonathan Shapiro

Integrated into Lesco from a young age, Jonathan learnt all there is to know about the business in various capacities before taking over as CEO.

Apollo Shadow Range

Introducing the new

APOLLO SHADOW

**Sleek. Modern.
Striking.**

The new Apollo Shadow Range is designed to bring a touch of sophistication to any space. With its straight-edge frame and matt texture finish, the range blends seamlessly into modern interiors while making a bold style statement.

The curved side profile,
creating a subtle shadow
effect against the wall.

Stylish expression through contemporary colours

The Apollo range features a choice of 3 colours all finished in a modern matt finish. Contemporary White, Edgy Sapphire Black, and Black Titanium.

Slim and ultra-strong

Our team puts each product through rigorous testing. Our products can withstand the most arduous of tests and is a reliable, dependable product.

Apollo USB Type A & C

Smart charging, built in.

The Apollo USB Type A & C outlets deliver intelligent power distribution to safely charge multiple devices at once. With advanced load sharing and built-in protection, your devices charge efficiently while battery life is preserved.

Designed for convenience and peace of mind, the unit automatically disconnects once charging is complete and protects against under and over charging. If a fault occurs, the USB simply disconnects, keeping your setup safe and reliable.

A long life, switch system suitable for all domestic installation.

Wipe clean, high gloss finishes create an attractive and aesthetic appeal whilst innovative design features promote easy installation and maintenance.

Removable, integral cover strips not only create modern design lines but also provide hidden access to mounting screws and all terminals.

Switches and sockets are a one piece construction (no yoke and cradle) thereby saving up to 40% on installation time, resulting in massive savings!

Patented Feature

Lesco's design team have saved an old-age problem when it comes to installation in tight situations. All cover strip ranges are connected from the front, even the shortest power cables can easily be located and connected.

The benefit of large box type terminals and being able to get a better torque on fastening screws means that when the outlet is fitted the chance of cables 'popping out' is significantly reduced.

**TIME SAVING
INSTALLATION!
FASTEST INSTALLATION
GUARANTEED**

Pipelli sockets are fitted with large box type terminal, with clamping plate for better cable retention and easier looping. This saves time and makes the products easy to install. The fact that there is no riveting of brass tracks on both ranges ensures minimal heat build-up and contact breakdown.

Products are designed and manufactured locally in South Africa providing Lesco absolute control over all aspects of each product.

Pipelli switches have a double spring system, providing a firmer contact, minimising arcing. This ensures safety and increases longevity, as well as maximum current transfer.

Purple	Open	Special Order

Pipelli and Pipelli QUAD SANS 164-2-1 Partially Dedicated Sockets are used in South Africa to provide clean, uninterrupted power for sensitive electronics by preventing standard plugs from being inserted due to their unique, flattened earth pin.

These sockets are a variation of the South African SANS 164-2 standard and include color coding to indicate specific uses such as general "special power" (red), UPS circuits (blue), and transformer-isolated power (black).

Suitable for Appliances, Geysers, Stoves & Airconditioning Units

Strength meets style

Our steel-covered switches, sockets and isolators are built for hard-wearing environments yet can be ordered in almost any colour. A solid Mono-Bloc system give installers confidence, while the clean design suits both industrial and residential spaces.

Stainless Steel

For a sleek, contemporary look, choose stainless steel covers. These plates elevate kitchens, offices or hotel rooms with a premium feel while offering all the functionality of our steel range – including sockets with USB and Schuko options.

Matt Black

Bring a touch of luxury to your space with the Matt Black series. These switches and sockets sit effortlessly in modern interiors, combining the strength of steel with an on-trend matte finish. Options include USB charging, Schuko and IEC combinations, plus matching isolators.

Mono Block Design Made Simple

The Dena Q and Dena ranges are built on a mono block design system, offering a wide variety of options to suit every need.

The mono block system makes it simple to exchange one module for another. With just a screwdriver, modules can be unclipped and reassembled with ease.

All switches are manufactured to comply with IEC specifications. Standard colours available: white and charcoal.

Professional wall box system

Move away from the old "labour intensive" wall box connection method. The Lesco ClusterLoc professional wall box system not only saves time but guarantees a consistently spaced and level installation.

All components simply "snap" together and can be installed in any configuration, horizontally and vertically. The ClusterLoc system is also ideal for dry wall partitioning installations and is compatible with all Lesco switches and sockets plus other South African fixed installation products.

Distribution & Protection Solutions

At Lesco, safety and reliability come first. Our full range of polycarbonate and steel distribution boards, ready boards, circuit breakers, and isolators are designed and tested to the highest quality standard.

Circuit Breakers

quality, approved & compliant circuit breakers

All Lesco circuit breakers and isolators are imported and tested on arrival in our test laboratory.

Lesco ensures that all quality procedures adhere to SABS regulations.

Our Story

We manufacture and distribute a wide range of innovative electrical products. We produce safe, high-quality electrical products while building an inclusive economy by empowering persons with disabilities, women, and youth, we're powering homes, and shaping brighter futures across the continent. LESCO Manufacturing produces switches, sockets, isolators, and circuit breakers for domestic and commercial use.

With over 60 years of experience, we're known for reliable, locally made solutions. Trusted by electricians and retailers across South Africa.

Sustainable Development Goals

LESCO Manufacturing and Switch King are passionate about developing a sustainable organisation that supports local talent and infrastructure. In doing so, we have been able to support a number of the United Nations 17 Sustainable Development Goals.

Socially Committed

LESCO creates and captures value through their assembly process, which is designed to incorporate more labour and less technology into its production of electrical products. The company's assembly line uses minimal equipment, electricity and machinery, making production a safe quick, cost effective and manual process. As a result, LESCO is able to drive social change by way of removing the typical barriers to employment. All classes of labour are empowered to assemble a product with great ease, which creates the opportunity to support local and typically marginalised people in South Africa, namely unskilled, semiskilled and disabled people.
